

Sarang Chaudhari

Cybersecurity Engineer & AI Security Developer

Mumbai, India • github.com/sarangchaudhari635-oss • linkedin.com/in/sarang-chaudhari-b10942381

PROFILE

Developer and cybersecurity enthusiast specialising in AI-powered threat intelligence, digital identity security, and data breach detection. Hands-on experience building production-grade security tools — including a real-time breach-auditing platform, an AI-driven misinformation watchdog, and a browser-based threat-monitoring extension — using React, TypeScript, Google Gemini AI, and Node.js. Passionate about applying agentic AI to automate cyber defence workflows and making security tools accessible to everyone.

PROJECTS

ShadowHunter — AI Cybersecurity Intelligence Platform

shadow-hunter.vercel.app | React · TS · Tailwind · Gemini AI · Manifest V3

- Built a full-stack SPA that audits digital identities for data breach exposure via Google Gemini AI, returning structured threat reports (severity, risk factors, countermeasures).
- Developed GuardAI — a Chrome/Edge browser extension (Manifest V3) for real-time page-level threat monitoring while browsing.
- Engineered a credit-based scan quota system with session persistence, user profiles, and dark/light theming.

Factline — Agentic AI Misinformation Watchdog

factline.vercel.app | Agentic AI · React · TypeScript · Vercel

- Designed an autonomous multi-source fact-checking agent that scans, verifies, and summarises claims without user intervention.
- Built a trending-misinformation dashboard surfacing currently circulating false narratives with AI-generated rebuttals.

NodeSphere — AI Mind-Mapping Tool

nodesphere-six.vercel.app | React 18 · TypeScript · React Flow · IndexedDB

- Shipped a local-first interactive canvas app with AI-powered node expansion (LLM sub-idea generation) and offline caching via IndexedDB.

PrivBadge — Privacy Identity Manager

github.com/sarangchaudhari635-oss | JavaScript · Privacy Engineering

- Built a privacy-focused credential and identity badge tool giving users transparent control over their digital footprint.

TECHNICAL SKILLS

Cybersecurity:	Threat Intelligence · Breach Detection · Digital Identity Auditing · OSINT · Browser Extension Security (MV3) · AI-driven SOC tooling
Languages:	TypeScript · JavaScript (ES6+) · Python · HTML5 · CSS3
AI / LLMs:	Google Gemini API · Prompt Engineering · Agentic Pipelines · JSON Schema Validation · Multi-source Verification
Frontend:	React 18 · Vite · Tailwind CSS · React Flow · SPA Architecture
Backend:	Node.js · REST APIs · IndexedDB · LocalStorage
DevOps:	Vercel · GitHub · GitHub Actions · Chrome MV3

SECURITY INTERESTS

- Threat Intelligence & Breach Analysis
- AI-Augmented Security Operations
- OSINT & Digital Identity Protection
- Browser Extension Security
- Agentic Cyber Defence Automation
- Misinformation & Disinformation Detection

CERTIFICATIONS & LEARNING

- Google Cybersecurity Certificate (in progress)
- TryHackMe / HackTheBox — active learner
- GitHub Quickdraw Achievement
- Open-source contributor — 9 public repos

DEPLOYED PRODUCTS
